

Sitka tower

Coverage from RAPTOR and GROOT COW (Temporary site)

- In-Building
- In-Car
- Street

Predicted coverage from RAPTOR and proposed SITKA Permanent Site

The Red (In Building) is the strongest signal, providing the best building penetration and fastest data rates. The Green (In Car) indicates where Verizon expects fair coverage in buildings and good coverage in cars. The blue (On Street) would be questionable coverage in buildings, fair in cars and good outdoors without obstructions. Areas without color are predicted to have unreliable to no coverage.
